Abbreviations

SR	split ring	Lj	lock join using shuttle thread	RoSR	ring formed on second part of SR
Lp	long picot	Wsh1	working shuttle 1	Wsh2	working shuttle 2
vlp	very long picot	vsp	very small picot	p or -	picot
btwn	between	+B	add beads to picot	Cl	close

The instructions given are for two colours which will need three shuttles for the face only (two used at a time). For the eyes I used short bugle beads, 2 for each eye and 3 for the mouth. The simplest way to avoid a knot at the beginning of the face is to work R1 (covering the shuttle thread with the first few ds) and then reversing the work, wrapping Wsh2 thread round the Wsh1 thread and starting R2 (again covering the shuttle thread with the first few ds). Continue as usual with SR3. The cat is worked in three parts.

Face – two shuttles filled with lighter colour. Change Wsh2 to dark after SR4

Starting with Wsh1
